

## How to install TVGo A03 & A03MCE under Windows Vista

Step 1: Please download the driver from Genius Website. And run this driver file to unpack it.

Step 2: Save all files in one folder.

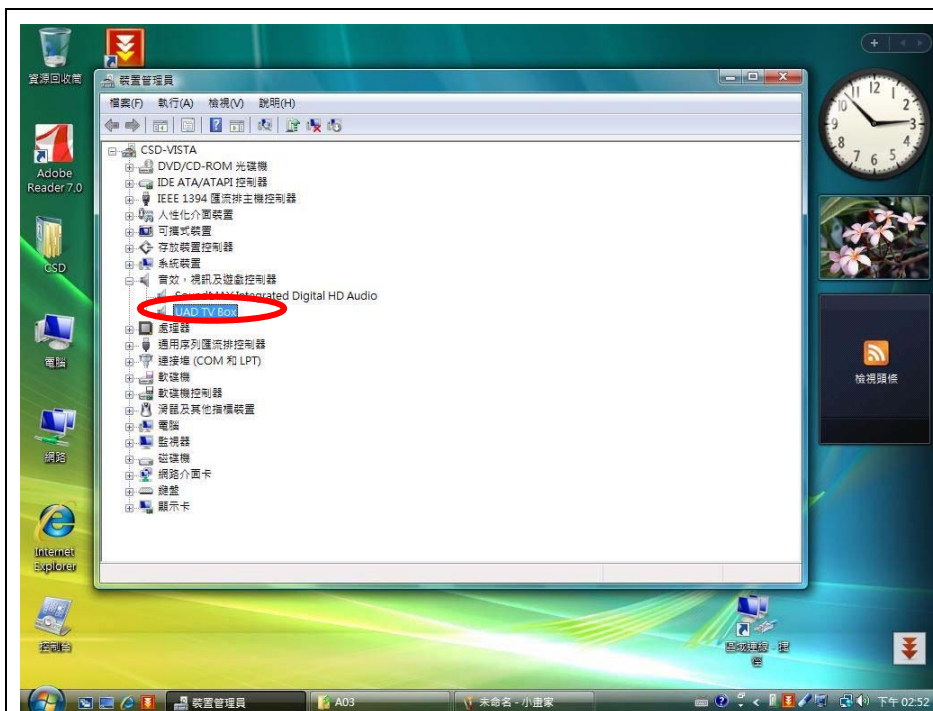

Step 3: Connect A03/A03MCE to one USB port of your pc. Follow on-screen wizard to install it.

Step 4: Run the TVGo A03 Vista.exe in step 2 to install the TV application.

Step 5: After installing application, you will get a “KYE Genius TVGo A03 Vista” icon on desktop.

Please double this icon to test A03.

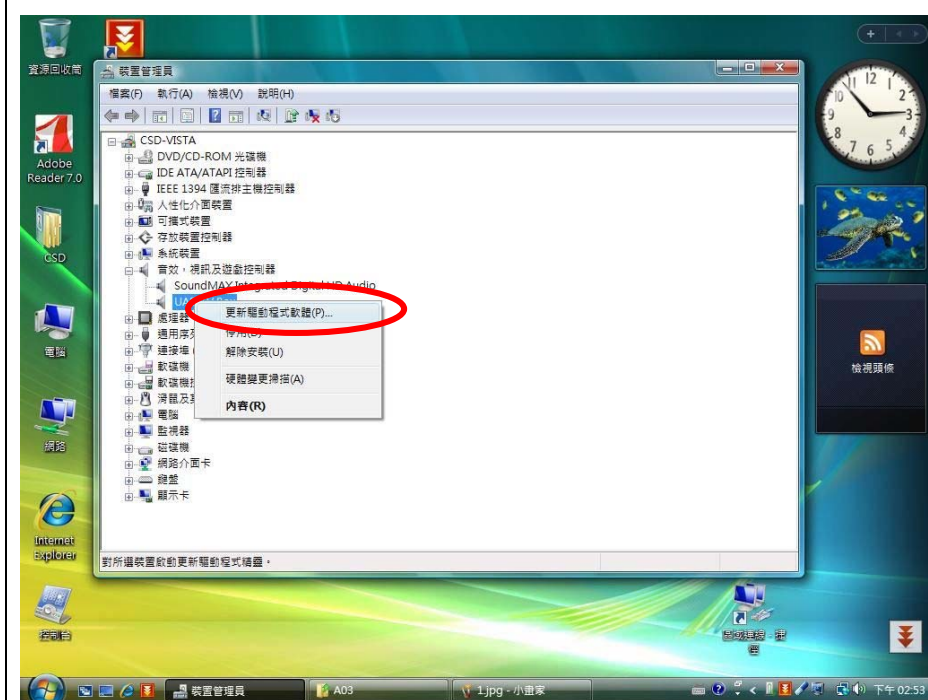

✂ If you got a message “Fail to initialize hardware!” after running “TVGo A03 Vista” in step 5, please follow below instruction to fix this problem.

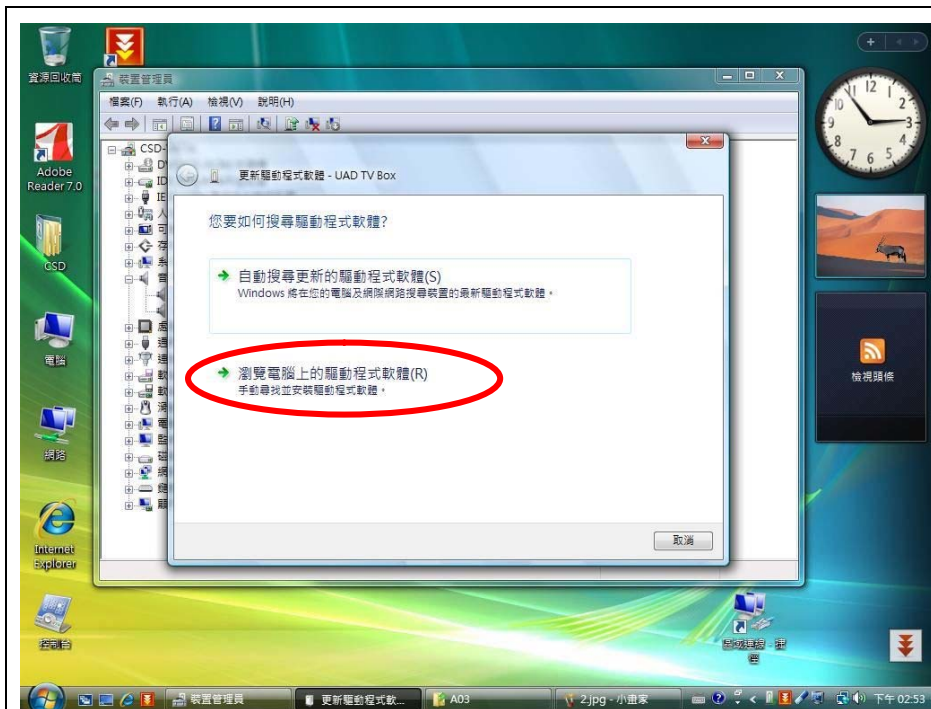

Please go to the system Device Manager.

Check if you got an “UAD TV Box” under “Audio/Video/Game Controller”.

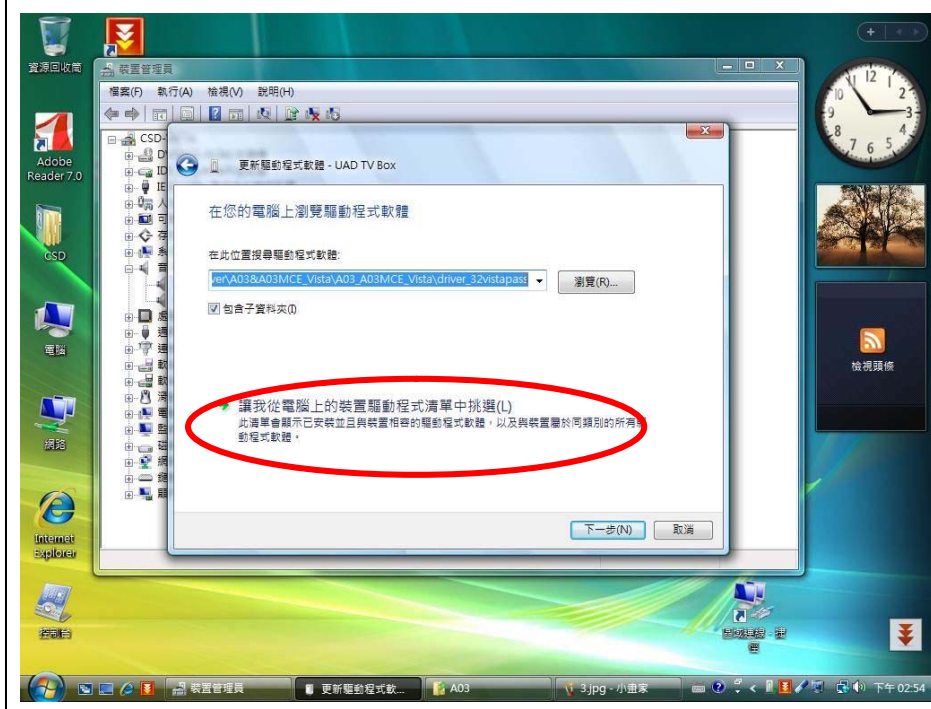

If yes, please follow next step to re-install the product driver.

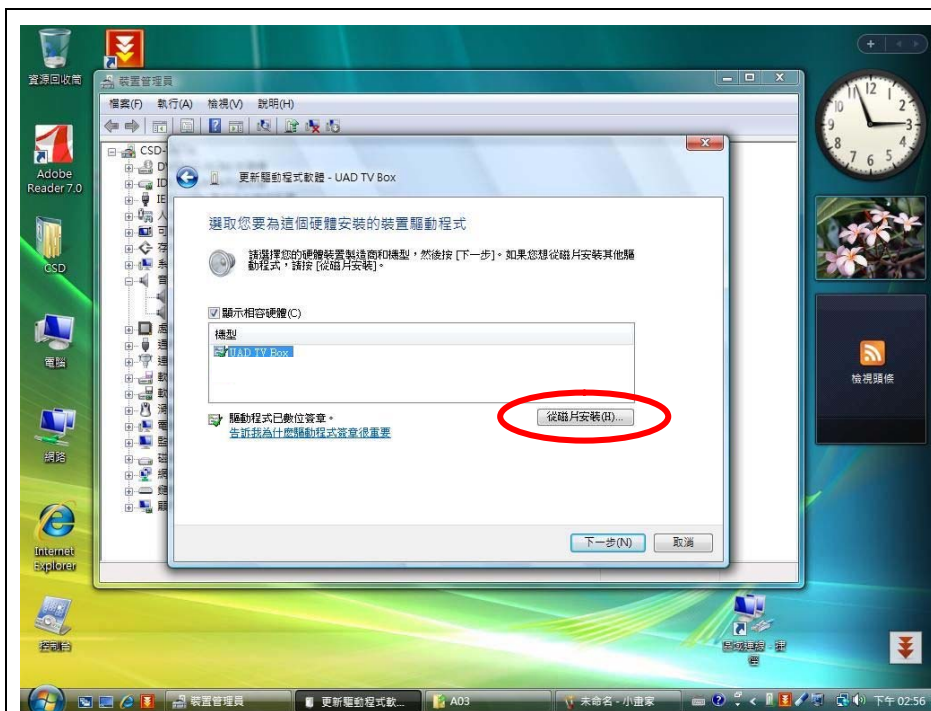

Right click “UAD TV Box” and choose “Refresh the product driver”.

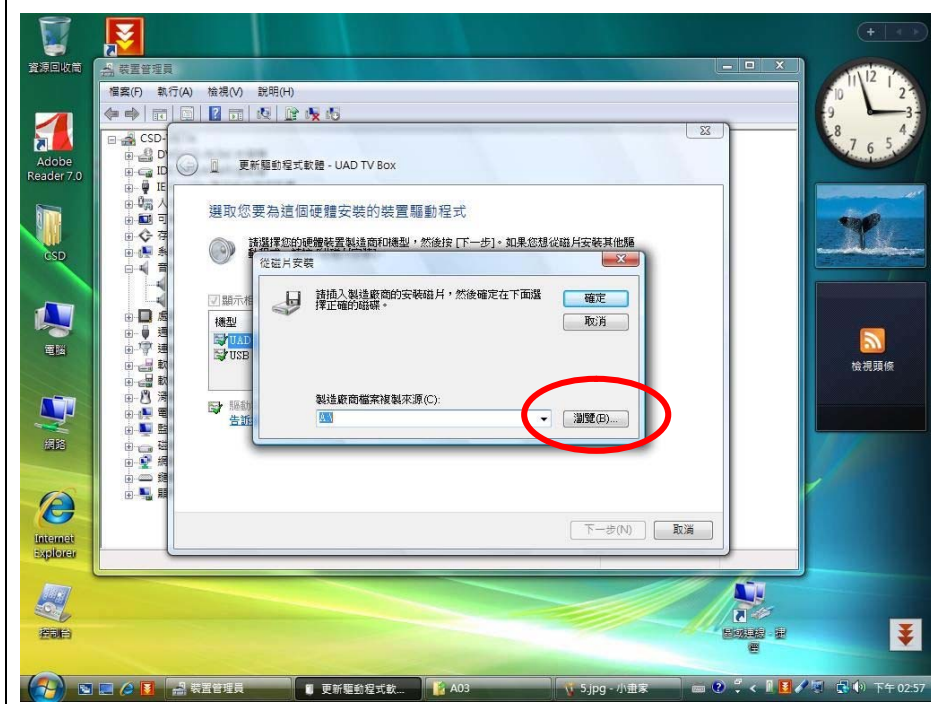

Please choose “**Browse my computer for driver Software**”.

Choose “Select driver from list”.

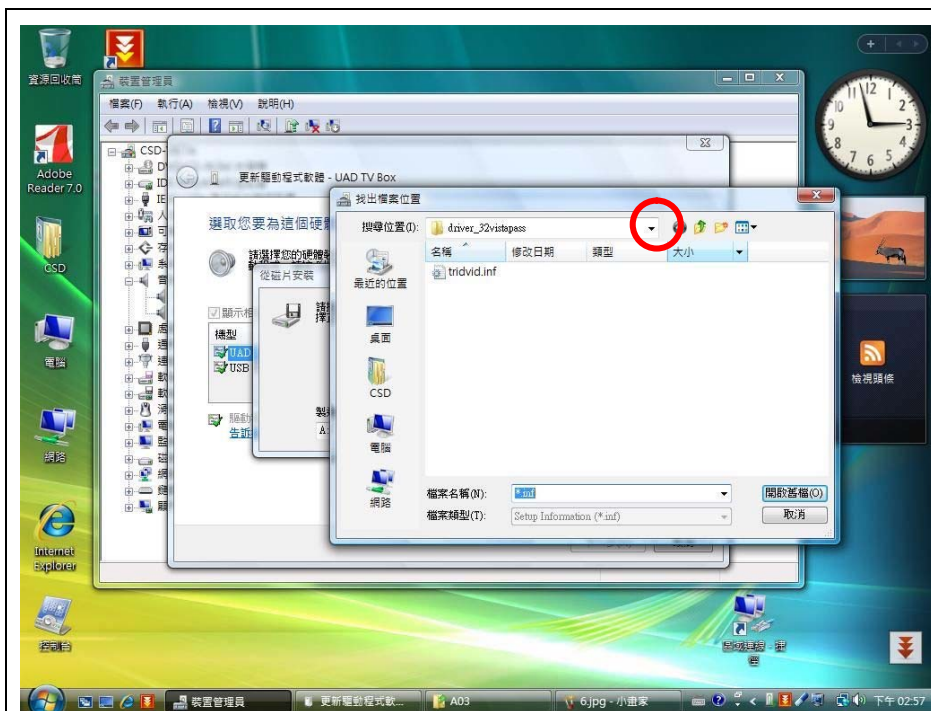

Click “Install from Disk”.

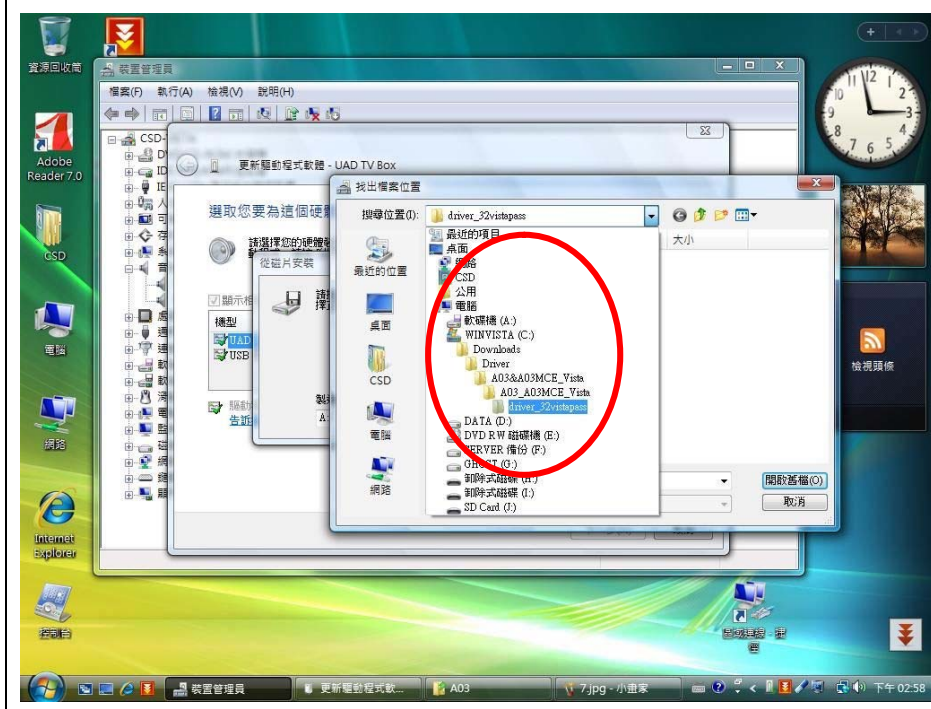

Click “Browse” button.

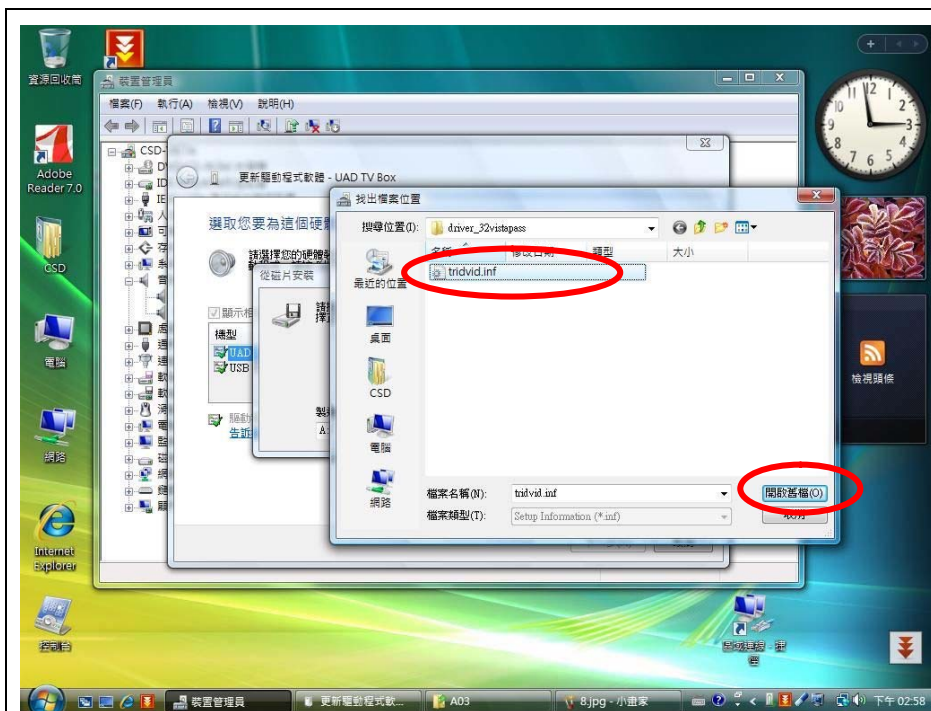

Click this button to browse your computer.

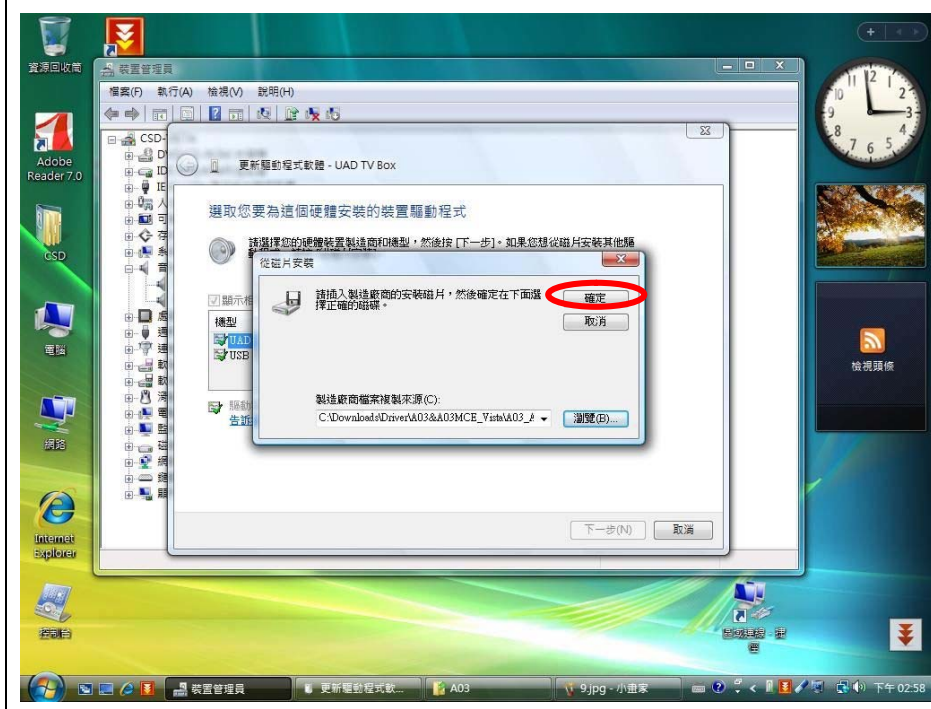

Find the driver in the Step 2 on page 1. And, if you own a Vista 32bit system, please select the folder named “driver\_32vistapass”. If you own a Vista 64bit system, please select “driver\_64vistapass”.

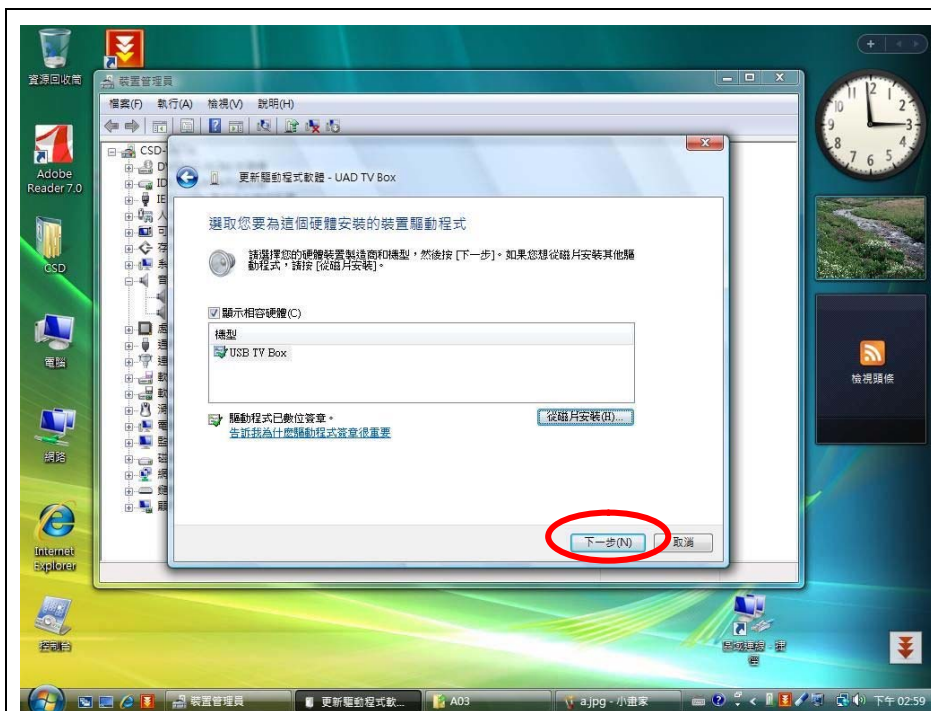

In the driver folder, you can find one file named “tridvid.inf”.

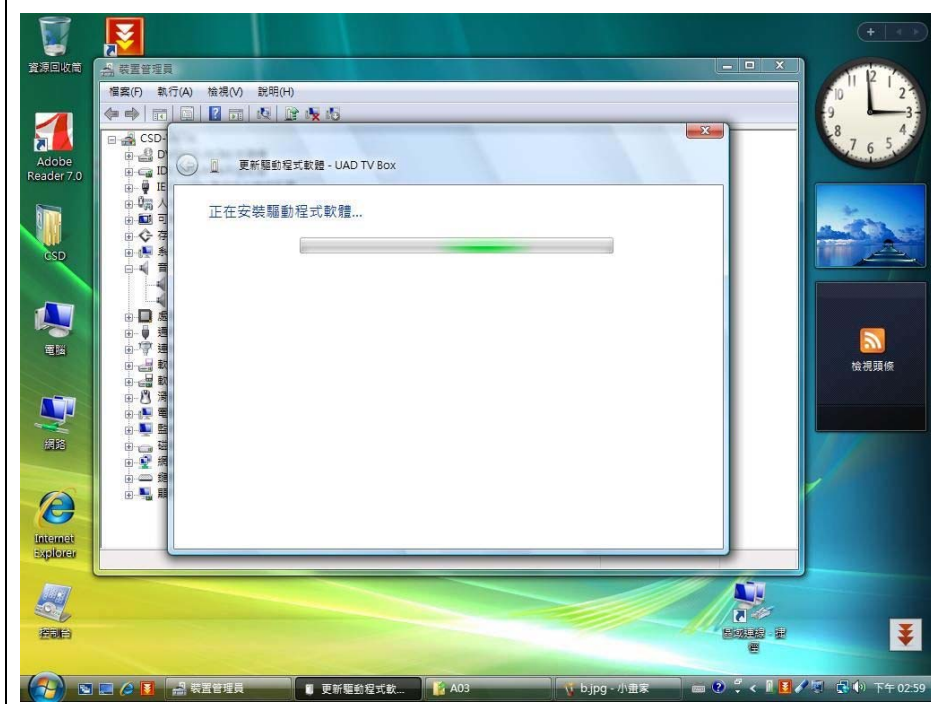

Please select this file and confirm your choice.

Please click “Sure”.

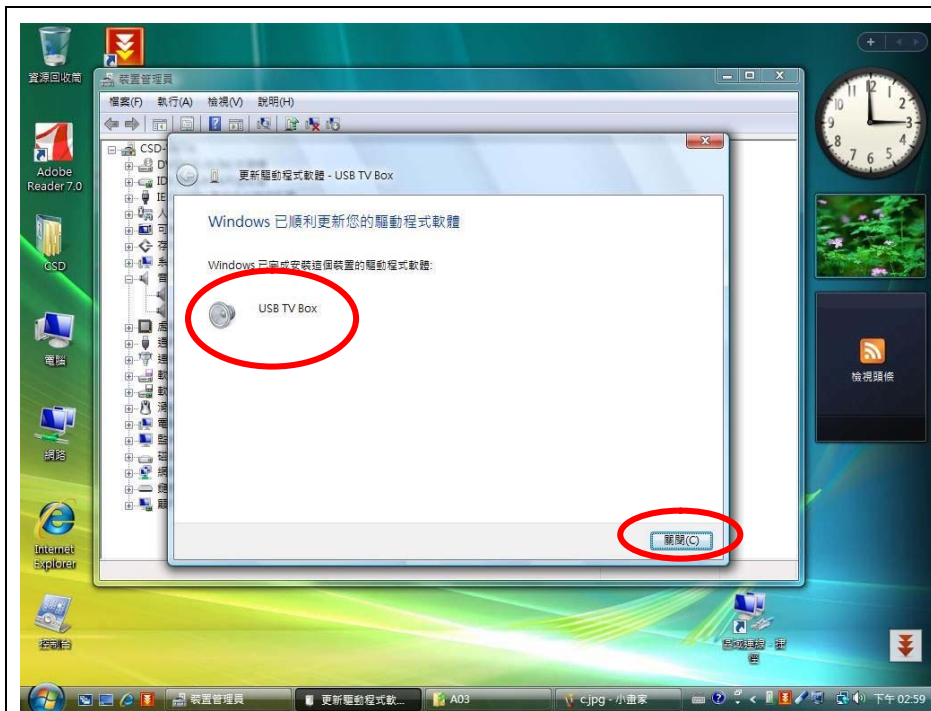

Please click “Next”.

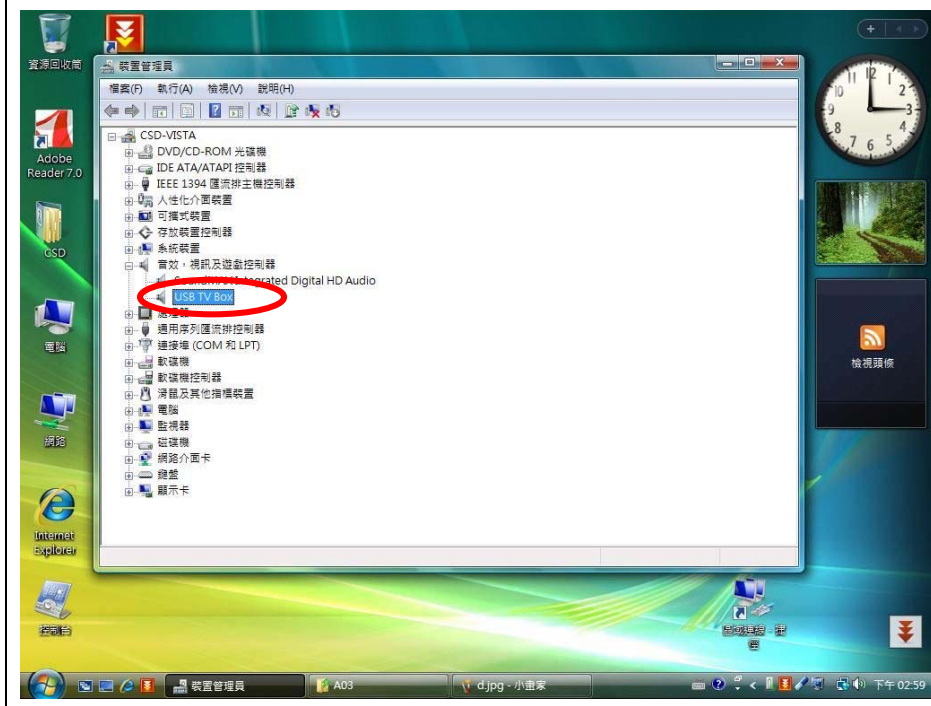

Windows Vista now install the product driver.

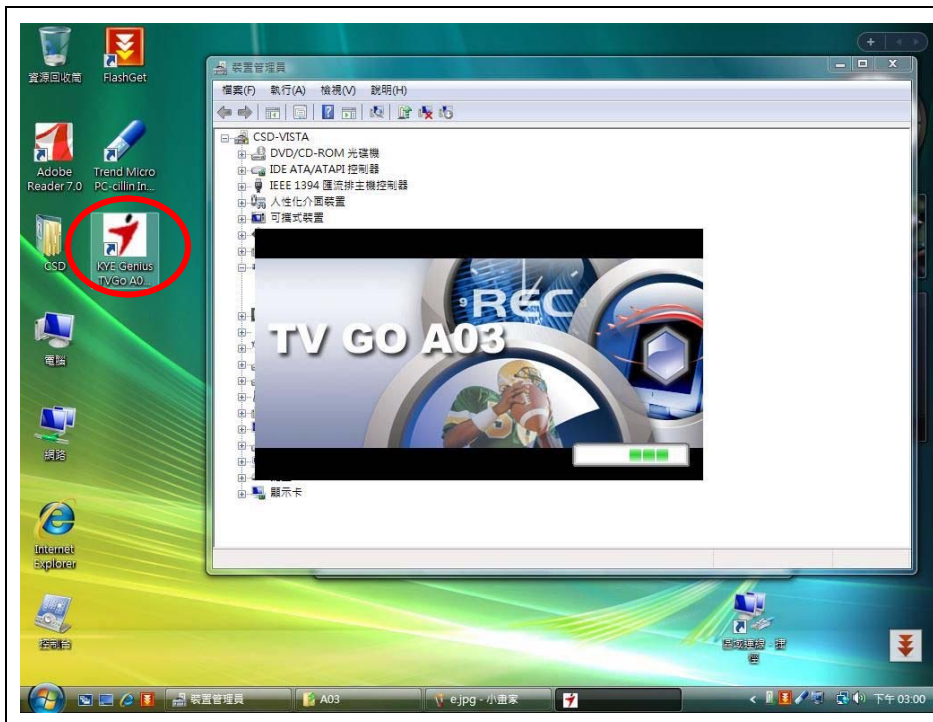

After finishing installing the product driver, you will get an “USB TV Box”. Please close this window.

Now, the tv device in Device Manager is changed to “USB TV Box”.

Please run the TV application again to test the product.
