

Version 1.7

- Added filters desaturate, equalize, gamma, and lightness.
- Enhanced the dropping of a picture on a page to give more visual feedback as to where the picture will be placed.

Version 1.6.1

- Added checking for improper installation of Photo Print.

Version 1.6

- Added filters diffuse, hue, oil paint, and saturation.

Version 1.5

- Added the ability to apply filters to images including blur, brightness, contrast, emboss, gray scale, invert, sepia, sharpen, and smooth.
- Added a new mode of operation to allow targeted operation on a selected picture. In this release, this feature supports Filter window and previous functionality (i.e., the ability to rotate an image with command keys).
- Added the ability to reset an image to its original state.
- Other minor fixes and enhancements.

Version 1.4

- Added a "Rotate 180" menu item for manipulating a picture.
- Added help text to the bottom of the main Photo Print window.
- Fixed a problem with closing the converter window while converting pictures.
- Fix a problem with the wrong target folder path being displayed for converted pictures.

Version 1.3

- Added support for batch converting photos suitable for Digital Picture Frames (DPF). This feature can greatly reduce file sizes thus allowing you to store more pictures on the DPF!

Version 1.2.1

- Corrected an editing bug in the layout editor

Version 1.2

- New layout editor to give you visual feedback when creating layouts.

Version 1.1

- Added the ability to remember the window position for the first window opened when Photo Print starts up.
- Added text labels for common page sizes throughout the program.
- Added new page layouts.
