

Welcome to
the world of
type-setting,
welcome to
Publishing with
iCalamus!

Desktop Publishing (in short, DTP) was a buzzword in former times when the first Personal Computers learned to output more than just rough letter images for printing text.

People then imagined that they could do all the stuff which is necessary for publishing a printed work at home on their desktop, with a single computer and a connected printer, with high resolution images, photographs and graphics included.
